Work experience

Graduate Web Developer   May 2019 - Present

Builds projects from home.

My work experience involves coding and developing websites and pages hands on by myself when working full-time in the Security industry for 12+ hours a shift. I have work experience using modern web languages to develop on my own and then do my best to debug and problem solve to find a solution to complex code related issues. As a junior webdeveloper I have had experience working with the interactive front end and middle and then working on the backend with databases and local and remote servers. I have learnt to collaborate with other developers and won first prize with them for our student hackathon in 2019. Being determined and Resilient has helped me to cope under pressure and find solutions to problems in development. I am also not afraid to ask for guidance and try help where my current skill allows me to.

Bidvest Noonan   Nov 2018 - Present

Patrol driver and supervisory staff in the security industry.

Worked in Security.   Dec 2013 - Nov 2018

ISS Facility services, MCR group, SecuriGroup, Ktech and Keyguard.
